FRESH ORANGE

Valencia

Availability

Valencia oranges are naturally have specially sweet & sour taste , more juicy and with lighter tissues than Navel , with seeds which makes them just right for juicing than eating .

The juice is brightly colored and invigorating. It has a balanced sweet-tart refreshing flavor. This variety is widely grown, making up about half of the world's entire crop each year.

Mangoes

First production will be available in 2022 Fresh Egyptian mango is one of the most nutritionally rich fruits, with a distinctive flavor, smell and taste, that's why Egyptian mangoes is a unique fruit, with an incomparable tropical delicacy. Golden yellow, crimson red, orange-red, or green; regardless of its color, the "fruit of the Gods" according to Indians, is always finger-licking good. Mango's overwhelming taste will overcome your senses, even before you remind yourself to eat in moderation.

FRUITS & VEGETABLES

POTATOES

First cultivated in the Andes mountains, potatoes were brought to Europe by Spanish explorers. Believed to have been poisonous due to its relation to the nightshade family, potatoes are know an internationally cultivated tuber with exceptional nutritional benefits. Packed with vitamin C, B6, magnesium, and potassium, potatoes also contain alpha-lipoic acid (a compound that helps convert glucose into energy), carotenoids, flavonoids, and caffeic acid, as well as unique tuber storage proteins, such as patatin, which exhibit activity against free radicals.

ONIONS

Astaple ingredient in kitchens worldwide, the onion is truly an internationally-recognizable flavor. This is Why, at Dakahlia, we take extra precautions in perfecting the taste and texture of our onions. Containing, natural sugars, vitamins A, BG, C, and E, onions are also a viable source of dietary fibres, folic acid and iron. For centuries, onions have been used to reduce inflammation and heal infections.

FRUITS & VEGETABLES

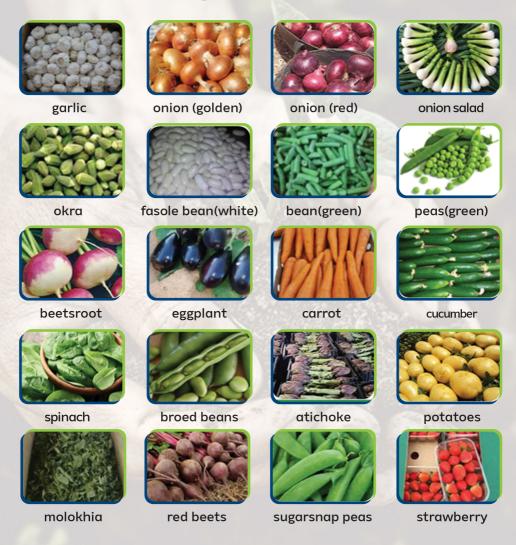

STRAWBERRIES

A member of the rose family, strawberries are lauded for being a bio-available source of vitamin C, polyphenols, and ellagic acid that boost the immune system and aid in collagen-production essential for youthful skin. Interestingly enough, strawberries are widely considered to being the first fruits to ripen inthe spring, making them convenient harvest markers. Since strawberries do not ripen further after being picked, the flavor of these fruits heavily relies on the conditions and level of ripeness when harvested.

PICKELS

Since the year 1820, Nicolas Albert has marketed glass containers commercially.

Even today, the manufacture of pickles has become situated-alone industrial science, This science is no longer confined to one country or another in the world, east and west, Found a qualified manufacturing follow this science with its origins.

Preserving vegetables from corruption in an acidic saline solution, This acid solution may be directly added to the vegetables or be an internal product of vegetables, Although This is a difference of next method, The addition of vinegar and salt directly to the cut vegetables does not depend on scientific grounds studied while the second method is the internal production of acidity in vegetables is what jumped pickle industry to Global trade levels are a method of inmost scientific

When vegetables are taken and cutting off, then a bit of salt is added and placed in a tightly sealed jar, it happens next one:

Bacteria are fed on sugar and analyzed by the formation of lactic acid and possibly CO2 and the atmosphere is free of Oxygen around it (or low oxygen).

Increases the activity and proliferation of bacteria and thus increases the production of lactic acid over time Over time, there is acidity in and around the vegetables, and there is salinity (added salt)

PICKELS

The vegetables are partially dehydrated and a portion of the water comes out of the water

The pickle is known for its taste and distinctive texture.

-So the acidity in the pickles in this second type is the acidity of the lactic acid, and this acid

It is the same as the acidic taste of yogurt and some types of cheese, which differs from the taste of vinegar In addition to the first type of pickles, it is an internal production of pickles.

-This type of bacteria found on the surface of vegetables is called a useful bacteria because it produces us milk acid, This means that bacteria are useful against harmful species that cause poisoning and disease, many beneficial bacteria are widely used in today's food processing.

The human has been able to isolate and multiply a milk bacteria and using it in food processing, where it is added to some types of milk when manufacturing milk or cheese and other products, and yet, the manufacture of pickles depends on what is on the surface of vegetables, not use the bacteria milk acid in making it, means wisdom of scientific.
